SUMMARY

A Full-Stack Software Engineer who develops scalable web systems and interactive games, combining engineering with creativity to build meaningful digital experiences. Experienced in backend development and database management through both academic and freelance projects, with a growing focus on building efficient, maintainable applications across web, mobile, and game platforms.

RELEVANT EXPERIENCE

Lead Developer2026

Intermed LLC Corporation | Urdaneta City, Pangasinan | Hybrid | Internship

- Developed a full-scale HRIS across 6 modules including employee management, timekeeping, payroll, analytics, request workflows, and system administration using Laravel and MySQL.
- Architected the database structure and backend logic, writing and reviewing code across all modules to ensure scalability, relational consistency, and clean implementation.
- Worked closely with the developers, sharing feedback on their code, helping distribute tasks, and jumping in on technical decisions whenever the team needed direction.

Freelance Game Developer2026

Private Client | Remote

- Developed a full mobile narrative game in Unity based on a provided game design document, implementing all core systems, mechanics, and content structures within a 3-month timeline.
- Collaborated closely with the game designer to translate defined user flows, interaction design, and system architecture into functional, production-ready code.
- Participated in technical documentation, contributing to system and feature specifications alongside the design team.

Full Stack Developer2026

SQNHS STE Enrollment System | San Quintin National High School | Freelance

- Designed the full enrollment flow — registration, student info form, admin approval, and account activation — along with role-based access for admin and student users.
- Developed a grade management system with auto-computed remarks and a parent/child subject structure for MAPEH-style subjects, ensuring accurate, non-duplicated grade computation.

Full Stack Developer2026

SQNHS Repository System | San Quintin National High School | Freelance

- Built a school enrollment and grading system for the STE program using Laravel, Tailwind CSS, and Alpine.js.
- Implemented the core repository structure and file-handling logic to support fast, organized access for school staff.

PROJECTS

RoboFrontier: A Game-Based Robotics Learning RPG2025

Capstone Project | Senior Programmer | Android | Unity | C#

- Led the development of the game's core systems and backend functionality, ensuring smooth gameplay and reliable data handling.
- Implemented database logic, game state management, and in-game mechanics to support interactive learning features.
- Contributed to story development and narrative flow, enhancing engagement and educational value.
- Collaborated with cross-functional team using Agile Scrum, coordinating with designers and illustrators to integrate programming and visuals seamlessly.

MiDas2024

Finance Mobile App | Flutter | Dart

- Developed a concept-based lending application where interest earnings are directed to charitable causes.
- Implemented core UI flows, input handling, and data presentation using Flutter widgets.

PawPal2025

Web Application | Frontend Developer | HTML, CSS, JavaScript

- Developed the frontend of a startup web application for pet care services such as grooming, pet walking, and pet sitting.

- Implemented booking-related UI flows, including service selection and scheduling interfaces.
- Collaborated with team members to align features with startup goals and user needs.

EDUCATION

Bachelor of Science in Information Technology

2022 – 2026

Urdaneta City University | Urdaneta City

AWARDS AND ACHIEVEMENTS

Android Development (Game Category), Champion

2025

IT Skills Olympics | University of Makati

Research Presentation, Top 3

2026

SikapTala: National Computer Science & IT Competition | De La Salle University Dasmariñas

Game Jam, Top 8

2026

SikapTala: National Computer Science & IT Competition | De La Salle University Dasmariñas

SKILLS

Languages: PHP, Java, Dart, C++, C#, Python, SQL, JavaScript

Frameworks: Laravel, Flutter, Node.js, Tailwind CSS, MySQL, REST, Unity, Firebase, Figma, Blender

Tools & Workflow: Git, GitHub, GitLab, JIRA, PyCharm, VS Code, Android Studio, Microsoft Teams

AI Tools: Claude Code, OpenAI, Codex
